## OccuMed of New England: COVID-19 Antigen and Antibody Screening Pricing for Central New England

Antigen Test/Screening reveals if a person is currently infected with a pathogen such as the SARS-CoV-2 virus. Once the infection has gone, the antigen disappears.

Antibody Test/Screening reveals if a person has already been exposed to an infection, by detecting antibodies in their blood or serum.

PCR Test/Screenings are used to directly detect the presence of an antigen, rather than the presence of the body's immune response, or antibodies. By detecting viral RNA, which will be present in the body before antibodies form or symptoms of the disease are present, the tests can tell whether or not someone has the virus very early on.
