George has 30 years of experience in the commercial construction and oil and gas industries. He has worked as a Construction Occupational Health and Safety Manager on multi-million dollar projects both domestically and overseas.

Beyond safety training, site safety supervision, and developing and implementing health and safety plans, his experience includes consulting with clients through OSHA investigations and interfacing with insurance providers in litigated claims. He is a leader in occupational health and safety and his skill set runs the breadth of safety engineering, from design, to execution and operations. He specializes in early hazard risk identification.

Thirty years ago, George was a Regional Safety & Health manager for the Boston, Washington D.C., Florida and Cleveland regions. He developed, implemented and maintained health and safety programs for the construction of large high-rise projects throughout the four regions.

Through his work as a Construction OSH Manager, George is responsible for enforcing OSHA and local safety codes, site safety inspections and reports and safety training for all employees. He also has vast experience managing OSH participation during front-end engineering/ design (FEED) and development of fit for purpose OSH procedures, and safety /health management systems (SHMS).

At Shell, George developed and facilitated construction HAZIDS. He monitored contractors' OSH processes and established OSH expectations during FEED and construction activity. He also collaborated with contractors & engineering houses to implement Shell's OSH expectations of zero harm during design, engineering and construction aspects for complex projects and provided support for Shell's OSH strategies. He conducted contractor pre-qualifications (actual field reviews & final reports), and provided OSH Construction input during HAZOP reviews as well as 3D Model Reviews, and presented OSH Project Summary Reviews for next level funding approvals.

At each stage in his career, George has enjoyed working onsite with all of the various trades and subcontractors, fostering camaraderie and a team-wide approach to safety. He successfully led a team of over 320 occupational health and safety professionals at the Yanbu National Petrochemical Complex Project in Saudi Arabia. This massive site had over 25,000 workers and 5 EPC contractors.

George sits on the board of the internationally recognized Institute for Safety and Health Management (ISHM), and serves on various committees, including accreditation examination.

As a construction safety consultant for United Alliance Services, George leverages his experience as a construction safety manager in the field and deploys to client project sites in a construction safety manager capacity. He brings his expertise and experience from projects around the world to assist a wide variety of businesses.
